

Planned Power Outages by PLN, Head of the General Section of UPNVJ: UTBK will still be implemented

Tuesday, 14 July 2020 12:11 WIB

HumasUPNVJ - In connection with the letter submitted by PT. PLN (Persero) Customer Service Unit (ULP) Depok City that today, Tuesday (14/07/20) from 10.00 to 15.00 WIB there will be planned blackouts in the framework of maintaining the network and distribution substations in the Limo area, Depok.

This has an impact on the UPNVJ UTBK location which is located in Limo, where today's UTBK exam must continue to take place on the Limo campus.

However, every effort was made so that the participants could still carry out UTBK at UPN Limo starting from installing the Generator Set to checking other electricity, this was conveyed by Cahyo Trijati, the general section head of UPN Veteran Jakarta when interviewed by the public relations team.

"We have prepared a Genset Machine (Generator Set) at the Limo campus, we will maximize it according to the available facilities so that the exam can still be carried out safely and smoothly," said Cahyo.

Based on the monitoring of the PR team this morning at 07.00 WIB the genset machine was already available at the UPN Limo campus as a backup power plant, with this it is hoped that the UTBK implementation until the tenth day can run as it should without significant obstacles.
